

# Topics

Second midterm focuses on material between 9/14 and 10/14

Topics to be covered:

- Dynamic Programming Algorithms
- Greedy Algorithms
- Abstract Data Types
- Stacks and Queues
- Greedy Algorithms
- Priority Queues and Heaps
- Binary Search Trees and later topics WILL NOT be covered

10/26/2015

L1.2

---

---

---

## Topics (I)

You should be able to:	Examples we've covered
State important definitions and properties	For example <ul style="list-style-type: none"><li>• What is the definition of a heap?</li><li>• What is its minimum and maximum height?</li></ul>
Prove correctness of an algorithm using induction or loop invariants	
Apply algorithms learned in class to examples	For example <ul style="list-style-type: none"><li>• Do an insertion/deletion into a heap</li></ul>
Apply ideas from class to new, related, problems	For example <ul style="list-style-type: none"><li>• Homework 6 (d-ary heaps)</li></ul>

## Topics (II)

You should be able to:	Examples we've covered
Solve a problem using dynamic programming strategy <ul style="list-style-type: none"><li>• Come up with a brute force solution</li><li>• Come up with a DP recursive formula</li><li>• Write pseudocode for bottom-up or memoized solution</li><li>• Analyze running time of the solution</li></ul>	Examples from lecture: <ul style="list-style-type: none"><li>• Weighted Interval Scheduling</li><li>• Weighted Independent Set<ul style="list-style-type: none"><li>• on a line (HW4.1)</li><li>• on a <math>2 \times n</math> grid</li></ul></li><li>• Longest Common Subsequence</li></ul> Exercises: <ul style="list-style-type: none"><li>• Minimarts (HW4.2)</li></ul>
Solve a problem using greedy strategy <ul style="list-style-type: none"><li>• prove that a given greedy strategy will not always yield an optimal solution using a counter-example</li><li>• come up with a greedy strategy</li><li>• write pseudo-code for the greedy algorithm</li><li>• analyze running time of your algorithm</li><li>• prove that the greedy strategy is optimal</li></ul>	Examples from lecture: <ul style="list-style-type: none"><li>• Unweighted Interval Scheduling</li><li>• Interval Partitioning Problem</li><li>• Scheduling to Minimize Lateness</li></ul> Exercises: <ul style="list-style-type: none"><li>• HW 5.1 (schedule last activity to start)</li><li>• HW 5.2 (interval sub-cover)</li></ul>
